

Please complete and return this form to school, even if you decide not to immunise your child at school. It is a legal requirement to give consent to receive the vaccine and authorise release of information as discussed below

## Meningococcal B vaccination

- In the Northern Territory, all people who live, work or attend school in an identified risk area are now eligible for the Meningococcal B vaccine.
- If your child can't be vaccinated at school or misses out because of illness or absence, you can visit a health clinic for the missed vaccines.

## Information and Consent for Vaccination

- Meningococcal disease is a rare but severe infection that occurs when meningococcal bacteria invade the body from the nose or throat. Meningococcal bacteria are carried in the nose and throat of a small proportion of healthy people (about 10%) and are spread through close prolonged contact.
- There are several different strains of meningococcal bacteria. The main strains that cause meningococcal disease are A, B, C, W and Y. There is a current meningococcal ACWY vaccine at 12 months and year 9 on the National Immunisation Program.
- Most people with meningococcal infection fully recover, but some people can develop long-term health complications including limb deformity, skin scarring, deafness and brain damage and fatal in 5-10% of cases. The disease can occur rapidly and may be difficult to diagnoseearly.
- Are the vaccines safe? Yes, the vaccines are very safe. Most vaccines can cause mild reactions which are usually short lasting and do not need medical treatment. Adverse reactions such as severe allergic reactions (anaphylaxis) are rare. Common side effects are injection site pain, redness and swelling, muscle pain, headache, nausea, decreased appetite, drowsiness and fever. Putting a cool wet cloth on the injection site and giving paracetamol (Panadol ®) helps to relieve injection site discomfort.

## Meningococcal B Vaccination
