

Routine cleaning guide to prevent scabies for transport providers

Scabies can spread on car seats

- ✓ Frequently **vacuum all car seats** and wash any removable linen seat covers in hot water over 50°C for at least 10 minutes.
- ✓ **Wear gloves** when taking seat covers off.
- ✓ Plastic seat covers should be wiped down with an odourless **hospital grade disinfectant** after each trip. Plastic seat covers are preferred over linen seat covers.
